

# FINISH

 $\frac{1}{12}$  $\frac{6}{10}$  $\frac{4}{8}$  $\frac{3}{3}$  $\frac{5}{7}$  $\frac{5}{10}$  $\frac{1}{9}$  $\frac{6}{8}$  $\frac{2}{7}$  $\frac{4}{7}$ 

Take turns rolling the dice. Move on the board. The player that lands on a greater fraction rolls and moves once more.

 $\frac{2}{10}$  $\frac{8}{12}$  $\frac{3}{9}$  $\frac{4}{10}$  $\frac{3}{5}$  $\frac{6}{7}$  $\frac{5}{8}$  $\frac{2}{12}$ 

Then both or all players roll and move again and compare. The first player to pass/reach the finish line wins.

 $\frac{9}{10}$  $\frac{2}{9}$  $\frac{3}{6}$  $\frac{7}{8}$  $\frac{1}{3}$  $\frac{8}{9}$  $\frac{4}{5}$  $\frac{7}{10}$  $\frac{1}{8}$  $\frac{1}{2}$ 

Use the fraction bars sheet to compare the fractions.

 $\frac{3}{7}$  $\frac{2}{5}$  $\frac{3}{12}$  $\frac{3}{10}$  $\frac{2}{4}$  $\frac{6}{12}$ 

1

 $\frac{4}{12}$
